VieGOPHER

—

A Gopher System for VM/CMS

—

The Code

Gerhard Gonter

June 16, 1993

Abstract

The Internet Gopher Protocol provides a simple, yet very effective method for distributed document search and retrieval. This document contains a documented source listing of the VieGOPHER system. Included are the sources of the server, the client and the VieGOPHER specific support programs and files. The printed version was generated from a Rose product file (`VIEGOPHR.PRODUCT`). The product file itself was generated by linearizing a portion of a NED hypertext file that contains the documentation, the code and all extra information. The hypertext editor NED as well as the hypertext file for the VieGOPHER system can be obtained from `Gerhard.Gonter@wu-wien.ac.at`.
